UZK24.262/-E1, UZO24.262/-E1
BATTERY MODULE 24V, 26AH, 40A

PRODUCT DESCRIPTION
The UZK24.262 battery module utilizes two or four non-spillable maintenance-free VRLA lead-acid batteries (connected in series) that are assembled in one package with all the required wiring included. Connector terminals for the paralleling of 2 batteries are included too.

The UZK24.262 comes with the sensor board UZW24.100 which contains a temperature sensor, fuses for 2 to 4 batteries plus an auto-resettable fuse which is suitable for balancer currents up to 2.5A. This fuse protects the center-tap wire between the battery module and the DC-UPS control unit.

The sensor board enables to monitor and charge the two batteries individually and precisely, extending the service life of the batteries and making matching of replacement batteries unnecessary. Usage of the sensor board is optional, the DC-UPS will also function without the sensor board installed.

The battery module is available in four different options. It can be ordered as UZK-module with batteries or as UZO-module without batteries, so these can be procured separately and installed at a later date to avoid outdated batteries. Both modules contain the connection board and wiring kit UZW24.100.

The extension kits can be ordered as UZK24.262-E1 with batteries or as UZO24.262-E1 without batteries for the paralleling of a second battery pack. Each module contains battery terminal covers and ring cable lugs.

ORDER NUMBERS
| Battery module | UZK24.262 | Battery module 24V, 26Ah
| UZO24.262 | UZK24.262 w/o batteries
| UZK24.262-E1 | Battery extension 24V, 26Ah
| UZO24.262-E1 | UZK24.262-E1 w/o batteries
| Batteries | UZB12.261 | Battery replacement 12V, 26Ah; 2pcs needed for one battery module

SHORT-FORM DATA
| Battery type | VRLA
| Battery life | 10 to 12 years Nominal, acc. EUROBAT
| Battery voltage | DC 24V Nominal
| Battery capacity | 26Ah Nominal
| Battery current | Max. 50A Discharging current
| | Max. 7.5A Charging current
| | Max. 2.5A Balancer current

Recommended charging voltage
- 27.8V At 10°C
- 27.5V At 20°C
- 27.15V At 30°C
- 26.8V At 40°C

Self-discharge rate
3%/month At 20°C

Battery fuse
2*40A ATOF® 287 040 from Littelfuse

Temperature sensor
PT1000

Temperature range
- For charging
- -10°C to +50°C
- -15°C to +50°C
- -20°C to +50°C
- -25°C to +50°C

For discharging @50A
- -25°C to +50°C
- -30°C to +50°C

For storage

Size (WxHxD)
359x214x167mm UZK24.262 incl.UZW24.100
359x214x128mm UZK24.262

Weight
2x 10.0kg UZK24.262
2x 0.70kg UZO24.262
2x 10.0kg UZK24.262-E1
2x 0.70kg UZO24.262-E1
0.25kg UZW24.100

Batteries
2x 12V, 26Ah;

The information given in this document is correct to the best of our knowledge and experience at the time of publication. If not expressly agreed otherwise, this information does not represent a warranty in the legal sense of the word. As the state of our knowledge and experience is constantly changing, the information in this data sheet is subject to revision. We therefore kindly ask you to always use the latest issue of this document (available under www.pulpower.com).

No part of this document may be reproduced or utilized in any form without our prior permission in writing.

WARNING Risk of electrical shock, fire, personal injury or death.
- Turn power off before working on the device. Protect against inadvertent re-powering.
- Do not modify or repair the unit.
- Use caution to prevent any foreign objects from entering the housing.
- Do not use in wet locations or in areas where moisture or condensation can be expected.
- Do not touch during power-on, and immediately after power-off. Hot surfaces may cause burns.
1. **INTENDED USE**

This module is designed for installation in an enclosure and is intended for the general professional use such as in industrial control, office, communication, and instrumentation equipment.

Do not use this module in equipment, where malfunction may cause severe personal injury or threaten human life.

2. **INSTALLATION INSTRUCTIONS**

This device may only be installed and put into operation by qualified personnel.

Before initial use, check the last charging which is marked on the battery. If it is older than 9 months, replace the battery.

Do not install the battery fuse until the installation work is complete.

This device does not contain serviceable parts, except the fuse or replacement battery. If malfunction should occur during installation or operation, first check the fuse and battery for proper functionality. If the unit is damaged or if the malfunction continues, immediately turn power off and send device to the factory for inspection.

Replacement fuses must be of the same type or an UL listed fuse with the same nominal value and characteristics.

Do not short-circuit the battery poles or power wires and always check correct battery polarity.

Mount the device onto a flat surface. Do not install the battery module upside down.

Place the battery module in a cool area inside a cabinet.

Install the device in an enclosure providing protection against electrical, mechanical and fire hazards. Ensure sufficient ventilation by following the requirements of the EN 50272-2.

CAUTION: The unit contains wet cell batteries. Ventilation of the installation room in accordance with the rules of Canadian Electrical Code, part 1 is required if used in Canada.

The battery module is for use in a controlled environment. Do not use the device in pollution degree 3 areas without additional protection or in applications where a degree of protection better than IP00 is required.

Do not use batteries other than the original batteries supplied by the manufacturer to avoid conflicts with agency approvals.

The maximum surrounding air temperature is +50°C. The operational temperature is the same as the ambient or surrounding air temperature and is defined as the air temperature 2cm below the device.

3. **INSTRUCTIONS FOR BATTERY STORAGE**

Do not store batteries or battery modules at temperatures higher than 25°C or performance and lifetime may change.

Do not store discharged batteries. Keep batteries fully charged!

Charge retention is important to get the longest battery life. Stored batteries which are not fully charged age faster than charged batteries.

Do not store batteries longer than 9 months without charging or performance and lifetime may change. Every 9 months or whenever the open circuit voltage (OCV) falls below 12.6V, the battery module should be charged. Apply a charging voltage of 13.8V (at 25°C) for 72 hours. Batteries with an OCV below 12V must not be charged anymore and must be disposed.
4. INSTRUCTIONS FOR REPLACING BATTERIES

Batteries need to be replaced periodically. The time interval depends on the ambient temperature in which the battery is used and on the number and depth of discharge cycles. In a typical application it is recommended to replace the batteries at least every 2 years.

Disconnect battery fuse before replacing the battery.

Regarding disposal of used batteries see chapter 5.

Fig. 4-1 Replacing the battery

To replace battery:
ATTENTION! Disconnect battery fuse before replacing the battery.
1) Loosen screw of battery holder with only one turn.
   Remove Insulating caps from the battery terminals.
2) Unscrew the battery terminals.
3) Slide the mounting bracket sideways and take the mounting bracket off.
4) Remove the battery.
5) Insert the new battery.
6) Fix it again with the mounting bracket and make sure that the lock washer lies between the screw head and mounting bracket.
7) Screw the mounting bracket with tightening torque: 2Nm.
8) Do not over-tighten screws of the terminal bolts of the battery. Recommended tightening torque: 2.3Nm.
9) Insert battery fuse

5. INSTRUCTIONS FOR DISPOSAL OF THE BATTERIES

Batteries must be completely discharged before replacement and can be returned to the supplier of the battery module or the battery manufacturer for disposal.

Always dispose batteries through a recycling organization.

Temperature

All parameters are typical values specified at 25°C ambient temperature unless otherwise noted.
9. SENSOR BOARD

The battery module includes a monitoring and protection board. This board contains a temperature sensor and a center-tap connection with an auto-resettable fuse to protect the center-tap wire between the battery module and the DC-UPS control unit.

The sensor board enables to monitor and charge the two batteries individually and precisely, extending the service life of the batteries and making matching of replacement batteries unnecessary.

Usage of the sensor board is optional, the DC-UPS will also function without the sensor board installed.

10. TERMINALS AND WIRING

The terminals are IP20 Finger safe constructed and suitable for field- and factory wiring.

BATTERY MODULE 24V, 26AH, 40A

All parameters are typical values specified at 25°C ambient temperature unless otherwise noted.
15. RECOMMENDATIONS FOR A LONG BATTERY LIFE

Temperature:
The temperature has the most impact on the service life. The hotter the temperature, the earlier the wear-out phase of the battery begins. The wear-out results in a degradation of battery capacity. Place the battery module in a cool location, e.g. near the bottom of the control cabinet. Do not place the battery module near heat generating devices. Do not overcharge batteries!

Fig. 15-1  Service life (according to EUROBAT) vs. ambient temperature, typ.

Number of discharge cycles and depth of discharge:
Do not discharge batteries more than necessary. Set buffer time limiter to the required buffer time. The number, as well as the depth of discharging cycles is limited. A replacement of the battery might be necessary earlier. When choosing the battery capacity, always try to get the next higher capacity than required. The depth of discharge reduces the service life of the battery and limits the number of cycles.

Fig. 15-2  Battery degradation vs. discharging cycles, typ.

Store batteries fully charged
Do not store discharged batteries. Keep batteries fully charged!
Charge retention is important to get the longest battery life. Stored batteries which are not fully charged age faster than charged batteries. Batteries which are not in use should be recharged at least once a year. The higher the ambient temperature, the shorter the charging interval. At storage temperatures higher than 30°C, recharging should be done at least every nine months.
16. MOUNTING ORIENTATIONS

The standard mounting orientation is an upright installation of the batteries onto a flat surface.

The following mounting orientations are also allowed:

Do not use the battery module in an upside down position:
